BACKEND SOFTWARE ENGINEER

Backend Software Engineer experienced in building REST APIs and database-driven applications. Skilled in Python, FastAPI, PostgreSQL, Redis, and Docker. Focused on clean architecture, performance, and maintainable code.

EXPERIENCE

Backend Developer

Developed REST APIs using Python and FastAPI. Designed PostgreSQL database schemas, implemented Redis caching, and improved application performance. Worked with Docker and automated testing.

Software Engineer

Builds and maintains backend services. Integrates external APIs, writes asynchronous Python code, maintains Redis cache logic, and develops containerized services.

EDUCATION

Riga Technical University

Computer Systems
Riga, Latvia

Studies focused on software development, databases, algorithms, operating systems, and computer systems.

SKILLS

- Python
- FastAPI
- PostgreSQL
- Redis
- Docker

LANGUAGES

- Latvian
- Russian
- English

PROJECTS

Job Aggregation API

1 AUGUST 2026

A job aggregation backend that collects vacancies from external sources, normalizes job data, removes duplicates, and provides REST API access. Built with FastAPI, PostgreSQL, and Redis.
