01 PROFILE

Backend Software Engineer experienced in building REST APIs and database-driven applications. Skilled in Python, FastAPI, PostgreSQL, Redis, and Docker. Focused on clean architecture, performance, and maintainable code.

02 EXPERIENCE

1 January 2023
– 30 June 2025

Backend Developer

Baltic Tech Solutions / Riga, Latvia

Developed REST APIs using Python and FastAPI. Designed PostgreSQL database schemas, implemented Redis caching, and improved application performance. Worked with Docker and automated testing.

1 July 2025
– Present

Software Engineer

Northstar Digital / Riga, Latvia

Builds and maintains backend services. Integrates external APIs, writes asynchronous Python code, maintains Redis cache logic, and develops containerized services.

03 EDUCATION

1 September 2022
– 30 June 2026

Riga Technical University

Professional Bachelor

Computer Systems

Riga, Latvia

Studies focused on software development, databases, algorithms, operating systems, and computer systems.

04 PROJECTS

Job Aggregation API

1 August 2026

A job aggregation backend that collects vacancies from external sources, normalizes job data, removes duplicates, and provides REST API access. Built with FastAPI, PostgreSQL, and Redis.
