Profile

Backend Software Engineer experienced in building REST APIs and database-driven applications. Skilled in Python, FastAPI, PostgreSQL, Redis, and Docker. Focused on clean architecture, performance, and maintainable code.

Experience

Backend Developer

1 January 2023 – 30 June 2025

Baltic Tech Solutions

Riga, Latvia

Developed REST APIs using Python and FastAPI. Designed PostgreSQL database schemas, implemented Redis caching, and improved application performance. Worked with Docker and automated testing.

Software Engineer

1 July 2025 – Present

Northstar Digital

Riga, Latvia

Builds and maintains backend services. Integrates external APIs, writes asynchronous Python code, maintains Redis cache logic, and develops containerized services.

Education

Riga Technical University

1 September 2022 – 30 June 2026

Professional Bachelor

Computer Systems

Riga, Latvia

Studies focused on software development, databases, algorithms, operating systems, and computer systems.

Skills

Python	Advanced
FastAPI	Advanced
PostgreSQL	Intermediate
Redis	Intermediate
Docker	Intermediate

Languages

Latvian	Native
Russian	C1
English	C1

Projects

Job Aggregation API

1 August 2026

A job aggregation backend that collects vacancies from external sources, normalizes job data, removes duplicates, and provides REST API access. Built with FastAPI, PostgreSQL, and Redis.
